10. Quick Start Guide

1. Introduction

Mintzy Plugin is a desktop trading application that automates equity trading through your broker account. You sign in with an API key from your Mintzy account, connect one of the supported brokers, and the app runs your chosen trading strategies for you — showing live profit and loss (P&L), a chart of the day's performance, and a full log of every trade the bot places.

What the app does

- **Automated trading.** You set the trading parameters (which stocks, how much capital, the stop-loss, the candle interval, and the strategy), and Mintzy executes the strategy through your broker while you watch.
- **Live dashboard.** See your broker cash, equity, and this month's P&L at a glance.
- **Session history.** Every session you run is recorded. You can reopen any past session to read its trade log and P&L, and download the data as a CSV file.
- **Performance statistics.** The app computes figures like win rate, best and worst days, drawdown, and month-by-month returns from your trading history.
- **Saved strategies.** Save a trading setup once and reuse it for future sessions — or start it with one click.

Who should use it

Anyone with a Mintzy account and a supported Indian broker account who wants hands-free, rules-based trading. This guide assumes you already have your Mintzy API key and a broker account (Angel One, TradeX, or Bear Street).

What this guide covers

This guide explains every screen and every major action in the app: signing in, reading the dashboard, navigating, running a trading session, saving strategies, changing settings, and logging out. Each section uses real screenshots from the application so you can compare what you see on your screen with this guide. Features that could not be verified with a live broker connection are clearly marked.

2. Getting Started

2.1 What you need

- The **Mintzy Plugin** desktop app, installed on Windows.
- A **Mintzy API key**. You get this from your Mintzy account at `mintzy.in`. The key decides which broker your sessions will use.
- An **internet connection**. The app must reach the Mintzy servers and your broker.
- Your **broker credentials** — the API key, client code, and password/PIN (or the equivalent for your broker) — to connect for trading sessions.

WARNING

Your API key and broker credentials are sensitive. Do not share them. The API key is shown as dots while you type it, and logging out removes the saved session from this computer.

2.2 First launch

When you open the app for the first time, you see the **sign-in screen**. This is the only screen you need before you can use the app.

Figure 1 — The sign-in screen shown when you first open the app

2.3 Sign in

- 0 Find the field labelled **API Key** in the middle of the window.
- 0 Click inside the field and **paste your Mintzy API key**. The characters are hidden as dots for security.
- 0 Click the eye icon on the right of the field if you want to see what you typed. Click it again to hide the key.

- 0 Click the **Continue** button below the field.
- 0 The button briefly shows *Verifying...* while the app checks your key.
- 0 When your key is accepted, the app opens your **Dashboard**.

The screenshot shows the Mintzy login interface. At the top left is the Mintzy logo. The main heading is "Welcome back" with the subtitle "Enter your API key to continue". Below this is a label "API Key" above a text input field containing a series of dots, indicating the key is hidden. To the right of the input field is an eye icon. Below the input field is a dark blue "Continue" button. At the bottom, there is a link: "Don't have an API key? [Get one from your Mintzy account](#)".

Figure 2 — Signing in with your API key entered (the key itself is hidden)

TIP

If you don't have an API key, click the link *Get one from your Mintzy account* under the sign-in button to open the Mintzy website.

2.4 If your key is not accepted

If the key is wrong or belongs to a different account, a red message appears in a box under the field. With the example account used in this guide the message reads:

"Invalid Angel One API key. Check the key in the Angel SmartAPI portal and try again."

(The wording may be different for TradeX or Bear Street keys.) Check that you copied the whole key, then try again.

Figure 3 — The error shown when an API key is not accepted

NOTE

If the app cannot reach Mintzy's servers (for example you are offline), the message instead says the app could not reach Mintzy. Check your internet connection and try again.

3. Understanding the Interface

After you sign in, you land on the **Dashboard**. The whole app shares the same shell: a sidebar on the left, a title bar at the top, and the main content area in the middle.

Figure 4 — The Dashboard with the main interface areas numbered

- 1. Sidebar (navigation).** The vertical panel on the far left. It contains the Mintzy logo at the top, the main navigation (Dashboard, Launch Terminal, Documentation, Settings), and your name, email, and a **Log out** button at the bottom.
- 2. Page title bar.** The strip at the top of the content area. It always shows the name of the page you are on and a short description.
- 3. Your account card.** Shows a greeting ("Good morning / afternoon / evening"), your first name, your email, and your broker (for example `ANGLE_ONE`).
- 4. Account metrics.** Three summary cards: **Cash in broker**, **Equity**, and **This month** (the month's profit or loss).
- 5. Live session status.** A row that tells you how many sessions are live or ready, with a *View all* link to the full session list.
- 6. Refresh.** The *Updated ...* text in the account card is also a button — click it to refresh the numbers right away. The app also refreshes automatically.

Collapsing the sidebar

The sidebar can be collapsed to a narrow strip of icons to give the content more room. Click the collapse icon (two arrows pointing left) at the top of the sidebar to collapse it, and the expand icon (two arrows pointing right) to bring the labels back. When it is collapsed, hovering over the strip temporarily shows the labels.

4. Navigation Guide

All navigation happens from the **sidebar** on the left. There are four destinations:

Sidebar item	What it opens
Dashboard	Your account overview, session list, and performance figures.
Launch Terminal	The trading workspace: sessions sidebar, broker connection, and live charts.
Documentation	A short in-app guide to the whole application.
Settings	Desktop preferences (startup, tray, notifications) and app updates.

Figure 5 — The sidebar (left) and the Launch Terminal page (right). Note the green "17 LIVE" badge showing how many sessions are active.

How to move around

- 0 Click any item in the sidebar once. The page opens in the main content area.
- 0 Click **Dashboard** at any time to return to the account overview.
- 0 The currently open page is highlighted in green in the sidebar, with a green indicator bar on its left.

How to log out

- 0 Look at the bottom of the sidebar. You will see your avatar, your name, and your email.
- 0 Click the **log out icon** (the arrow-out-of-door symbol) on the right of your name.
- 0 The app returns to the sign-in screen. Your session is removed from this computer.

Figure 6 — After logging out you are returned to the sign-in screen

NOTE

If a trading session is live, a green *Live* badge appears on the **Launch Terminal** item in the sidebar so you always know trading is running, even from other pages.

5. Feature-by-Feature Guide

5.1 Dashboard — Overview

What it does: The Overview tab is the first thing you see after signing in. It summarises your account and recent performance.

When to use it: Any time you want a quick answer to "how is my trading doing?"

Figure 7 — Dashboard Overview: greeting card, three metrics, and live session status

What each part means

- **Cash in broker** — the cash available in your broker account.
- **Equity** — your total account value including open positions.
- **This month** — the net profit (green) or loss (red) so far this month.
- **Live session status** — for example "1 live trading session" or "No live sessions".
- **Performance** (below, scroll down) — statistics computed from your session trades: best and worst scripts and days, average win rate, max drawdown, average risk:reward, overall returns, and winning/losing streaks.

Figure 8 — The Performance section, computed from your session trades

5.2 Dashboard — Sessions

What it does: The Sessions tab lists every trading session on your account, newest first. Sessions are shown 10 per page.

When to use it: To find a past session, check a status, or download session data.

Dashboard
Account overview and session history

Overview Sessions Month over month

Sessions

Harsh Kamoriya
your.email@example.com

Figure 9 — The Sessions tab, listing every session with its status and a CSV download button

- Click the **Sessions** tab at the top of the Dashboard.

- 0 Each row shows a short session ID, the date, the status (Trading, Ready, Stopped, Completed, Abandoned, and so on), and a download button.
- 0 Click a row to open that session in **Launch Terminal** and read its logs and P&L.
- 0 Click the **download icon** in a row to download that session's tradebook or logs as a CSV file.
- 0 Use the **page controls** at the bottom (previous, next, and page numbers) to move through many sessions.

TIP

The *Download latest* button at the top of the list downloads the most recent session's data in one click.

5.3 Dashboard — Month over month

What it does: Shows your net profit or loss for each of the last 12 months as tiles.

When to use it: To see your progress over time at a glance.

Figure 10 — Month over month returns. Months with no trading show a dash.

Click the **Month over month** tab (or the link in the Performance section) to open it. Green numbers are profitable months; red numbers are losing months; a dash means no trading happened that month.

5.4 Launch Terminal

What it does: Launch Terminal is the trading workspace. The left panel lists your sessions; the main area is where you connect a broker, set up a session, and watch it trade.

When to use it: To start a new trading session, resume a connected one, or review an old session.

Figure 11 — Launch Terminal with the sessions panel open. "Ready to trade" is shown when no session is selected.

The sessions panel

- **New session** — starts the broker connection flow.
- **Saved strategies** — opens your saved trading setups.
- **Live** — sessions that are trading or simulating right now, with a green "Live" or amber "Sim" label.
- **History** — all finished sessions. Click one to view it read-only; hover and click the trash icon to delete it.
- The panel can be collapsed with the panel icon at its top.

WARNING

A session that is **Live** is trading with real (or simulated) money right now. Deleting it, or stopping it from the live dashboard, stops that trading. Only delete sessions you no longer need.

5.5 Connect Broker

What it does: Before a session can trade, the app connects to your broker with your broker credentials. The fields change depending on your broker:

- **Angel One** — API Key, Client Code, Password / PIN.
- **TradeX** — Access Key / App Key, Client ID / User ID, Access Secret / Secret Key.
- **Bear Street** — API Key, User ID, Password, and Registered Mobile Number (one-step login, no separate code screen).

Figure 12 — The Connect Broker form (this account uses Angel One). The broker is shown in the grey pill above the fields.

- 0 In Launch Terminal, click **New session**.
- 0 Enter your broker's **API key**, **client code**, and **password/PIN** in the fields. Use the eye icon to reveal each password field.
- 0 Click **Continue**.
- 0 If your broker needs a second factor, the **Two-Factor Auth** screen appears next (see 5.6). Otherwise the app moves straight to the session configuration.

NOTE

Submitting the credentials creates a session record on your account. If the login cannot be completed, that session stays in your History and can be deleted (see section 6.6).

5.6 Two-Factor Auth (2FA)

What it does: Some brokers require a 6-digit code (a TOTP) from an authenticator app to approve the login.

Figure 13 — The Two-Factor Auth screen, where you enter the 6-digit code from your authenticator app

- 0 Open your authenticator app (for example Google Authenticator) and find the code for your broker.
- 0 Type the 6-digit code into the large centred field.
- 0 Click **Verify**.
- 0 When accepted, the app moves to the session configuration screen.

WARNING

Codes expire every ~30 seconds. If the code is wrong or expired, a red message appears — in this example: *"Invalid or expired TOTP. Wait for a new code in your authenticator and try again."* Wait for the next code and try again. The field clears itself so you can't accidentally submit a used code.

Figure 14 — The error shown when the 6-digit code is invalid or expired

Click **Back** if you entered the wrong broker credentials and want to reconnect.

5.7 Configure Session (not fully verified)

What it does: After the broker accepts your login, the app shows the **Configure Session** screen where you set your trading parameters before starting.

This screen could **not be fully captured for this guide**, because reaching it requires a successful live broker login. Based on the application's design it contains the same fields shown in the Saved Strategies editor (section 5.8):

- **Saved strategy** — pick a saved setup to fill the form automatically.
- **Candle interval** — 1m, 5m, 15m, or 75m.
- **Strategy** — Stoppage Reversal or Exposure Expansion.
- **Use available broker cash** — let trades draw from your broker balance.
- **Manual allocation** — add one or more stocks, each with a capital amount and stop-loss percentage.
- **Leverage** — 1×–5× position scaling for a saved strategy.
- **Start Trading** — starts the session; **Abandon session** closes it without trading.

NOTE

For Angel One and Bear Street, trading begins in **simulation** and can switch to live; TradeX starts live. See the in-app Documentation page for more detail.

5.8 Saved Strategies

What it does: Saved Strategies stores reusable trading setups so you don't have to re-enter them every session.

When to use it: When you have a setup you like, save it once and reuse it — or *Quick Start* it on an existing session.

Figure 15 — The Saved Strategies page. Each card shows the strategy's summary; the editor opens on the right.

What each card shows

- **Name and description** of the strategy.
- Badges such as *4 manual*, *4 auto*, the strategy name, the candle interval, and leverage (for example *3× leverage*).
- **View / Edit** — open the setup in the editor.
- **Quick Start** — start this strategy on the currently connected session (only appears when a session is connected).
- **Delete** — remove the strategy (you are asked to confirm).

NOTE

Your account allows a limited number of saved strategies (5 on the test account used for this guide). If you reach the limit, delete one before saving another.

5.9 Settings

What it does: The Settings page controls how the desktop app behaves on your computer.

Figure 16 — The Settings page

- **Auto-launch on startup** — open Mintzy automatically when you log into Windows.
 - **Minimize to tray** — when on, closing the window (X) hides Mintzy in the system tray instead of quitting; click the tray icon to reopen. When off, X quits the app completely.
 - **Desktop notifications** — show system alerts for updates and important events.
 - **App updates** — click *Check for updates* to look for a newer version. If one is ready, an *Install now* button appears.
 - **About** — shows the app version and a link to manage billing on mintzy.in.
- 0 Click a toggle switch to turn a setting on or off. The switch slides and changes colour.
 - 0 A confirmation message appears in the bottom-right corner of the window for a few seconds.

Figure 17 — A confirmation toast appears in the bottom-right after changing a setting

NOTE

These desktop settings are only available in the installed desktop app. In a web preview they show a notice saying so.

5.10 Documentation (in-app)

What it does: The Documentation page is a built-in guide covering sign-in, the dashboard, how the performance figures are calculated, the terminal, trade logs, live P&L, settings, and the sidebar.

Figure 18 — The built-in Documentation page. Click the pill buttons to jump to a section.

6. Workflow Walkthroughs

These walkthroughs take you through the app's most common tasks end to end.

6.1 Sign in to the app

Goal: Open the app and reach your Dashboard.

Starting point: The app is installed and you have your Mintzy API key.

- 0 Double-click the **Mintzy Plugin** icon to open the app.
- 0 On the sign-in screen, click the **API Key** field.
- 0 Paste your API key (the dots hide it).
- 0 Click **Continue**.
- 0 Wait a moment for *Verifying...* to finish. The Dashboard opens.

Expected result: You see the Dashboard with your name, metrics, and session status. If you see a red error instead, go to section 7.

6.2 Browse the dashboard

Goal: Understand your current trading position.

Starting point: You are signed in on the Dashboard.

- 0 Read the three metric cards: **Cash in broker**, **Equity**, and **This month**.
- 0 Check the **live session status** row to see if anything is trading.
- 0 Click **Sessions** to browse the full list; click a row to open a session.
- 0 Click **Month over month** to see the last 12 months.
- 0 Scroll the Overview tab to see the **Performance** statistics.

Expected result: You can see your cash, equity, monthly P&L, sessions, and performance figures.

6.3 Create a saved strategy

Goal: Save a trading setup you can reuse later.

Starting point: You are signed in.

- 0 In the sidebar, click **Launch Terminal**.
- 0 In the sessions panel on the left, click **Saved strategies**.
- 0 Click **New strategy** at the top.
- 0 Enter a **Strategy name** (for example "Morning momentum") and an optional **Description**.
- 0 Choose a **Candle interval** and a **Strategy**.
- 0 Optionally tick **Use available broker cash**.
- 0 Under **Manual allocation**, click **Add** to add a stock.

- 0 Click the **Select symbol** box, type the stock name in the search box (for example `HCLTECH`), and click the matching result.
- 0 Enter the **Capital** in rupees and the **Stop loss** percentage.
- 0 Click **Save strategy**.
- 0 A confirmation toast appears: "*Strategy saved*". The editor stays open so you can now set leverage (1x–5x) with the **Set leverage** control.

Figure 19 — The strategy editor with a manual allocation added

Figure 20 — After saving, the editor remains open and the leverage control becomes available

Expected result: Your new strategy appears as a card in the list with its badges.

6.4 Delete a saved strategy

Goal: Remove a strategy you no longer need.

Starting point: You are on the Saved Strategies page.

- 0 Find the strategy's card and click **Delete**.
- 0 A confirmation dialog appears: *"Delete strategy?"* with the strategy's name.
- 0 Click **Delete** to remove it, or **Cancel** to keep it.
- 0 After deleting, a toast confirms the deletion and the card disappears.

Figure 21 — The confirmation dialog before deleting a strategy

WARNING

Deleting a strategy is permanent and cannot be undone. If you might want it again, keep it.

6.5 Connect a broker and start a session

Goal: Start a trading session connected to your broker.

Starting point: You are signed in, and you have your broker credentials ready.

- 0 In the sidebar, click **Launch Terminal**.
- 0 Click **New session** (in the main area, or in the sessions panel).
- 0 On the **Connect Broker** screen, enter your broker's API key, client code, and password/PIN (fields vary by broker — see section 5.5).
- 0 Click **Continue**.

- 0 If asked, enter the **6-digit code** from your authenticator app on the **Two-Factor Auth** screen and click **Verify**.
- 0 On the **Configure Session** screen, set your strategy and allocation (section 5.7), then click **Start Trading**.
- 0 You are taken to the live session dashboard where the chart, P&L, and trade logs appear.

Expected result: A live dashboard with the session's P&L chart, logs, and status.

WARNING

Steps 4–7 require a real, valid broker account. This guide could only verify up to the Two-Factor Auth step (sections 5.5–5.6). The configuration and live-trading screens were not captured because they need a live broker connection. Follow the on-screen steps carefully — trading involves real financial risk.

6.6 Delete a session

Goal: Remove an old session from the list.

Starting point: You are in Launch Terminal.

- 0 In the sessions panel, go to the **History** section.
- 0 Hover over a session row to reveal the **trash icon** on its right, and click it.
- 0 A confirmation dialog appears: *"Delete session?"* — it warns that the session and its history will be permanently removed and the tradebook CSV will no longer be downloadable.
- 0 Click **Delete** to remove it, or **Cancel** to keep it.

Figure 22 — The confirmation dialog before deleting a session

WARNING

Never delete a session that is currently **Live** unless you intend to stop that trading. Deleting removes its tradebook downloads too.

6.7 Log out

Goal: Sign out and return to the login screen.

Starting point: You are signed in.

- 0 At the bottom of the sidebar, click the **log out icon** next to your name.
- 0 The app returns to the sign-in screen. Your session is cleared from this computer.

Expected result: The sign-in screen appears (Figure 6).

7. Troubleshooting

For each problem below, the possible cause and the solution are based on behaviour observed while testing the app.

I can't log in

Problem	Possible cause	Solution
"Invalid ... API key" red message	The key is mistyped, incomplete, or not for this account	Copy the whole key again from your Mintzy account and re-paste it. Check for stray spaces.
"Could not reach Mintzy..." message	No internet connection, or the servers are unreachable	Check your internet connection and try again. If it persists, try again later.
Nothing happens after clicking Continue	The app is still verifying	Wait a few seconds. If it stays stuck, close and reopen the app and try again.

I can't find a button or page

Problem	Possible cause	Solution
I don't see the navigation labels	The sidebar is collapsed to icons	Click the expand icon (two arrows pointing right) at the top of the sidebar, or hover over it to peek.
No "Saved strategies" text	The sessions panel is collapsed to icons	In Launch Terminal, click the panel icon (bars) at the top-left of the sessions rail.
I can't find "New session"	There are two: one in the main area, one in the sessions panel	Click either — the one in the main area appears when no session is selected.

A button appears disabled or won't submit

Problem	Possible cause	Solution
Continue / Verify button is greyed out	A required field is empty, or the app is busy	Fill every field. On the 2FA screen, enter all 6 digits before the Verify button enables.
Form won't submit	Required fields are missing (e.g. "Fill in all fields")	Complete all fields and try again. For Bear Street, the registered mobile number is required.
Quick Start button is missing	No session is connected	Connect a broker session first (section 6.5); Quick Start appears only with a connected session.

The 2FA code fails

Problem	Possible cause	Solution
"Invalid or expired TOTP..."	The code was mistyped or rotated (codes change every ~30 s)	Wait for the next code in your authenticator and type it immediately. The field clears itself after an error.

Data looks wrong or missing

Problem	Possible cause	Solution
Dashboard shows dashes for performance	No live trades yet, or statistics are still being calculated	Wait for the app to finish (the header says "Recalculating..."). Figures settle once a day at 4:30 pm IST.
"No trading sessions yet"	No sessions on this account yet	Start one from Launch Terminal. Past sessions appear here.
Search produces no results (symbol picker)	The symbol isn't in the supported list, or the spelling differs	Only the supported symbols list is searchable. Try the full name as shown in existing strategies (e.g. HCLTECH, not "HCL").
Numbers are from an old time	The dashboard refreshes on a timer and on focus	Click <i>Updated ...</i> in the account card to refresh immediately.
Session shows "Connecting" and never advances	The broker login was not completed	Go Back and reconnect your credentials, or delete that session from History.

Session / account problems

Problem	Possible cause	Solution
You're sent back to the login screen suddenly	Your session expired (the app signs you out)	Sign in again with your API key. A fresh session lasts up to 24 hours.
You deleted something by accident	—	Deletion is permanent and cannot be undone. Keep backups of any CSVs you need.
"You've reached the maximum number of saved strategies"	Your plan limits how many strategies can be saved	Delete an unneeded strategy, then save the new one.
"Couldn't load trading data"	Network issue while loading the dashboard	Click Retry , or check your connection.

8. Frequently Asked Questions

Where do I start?

Open the app, sign in with your Mintzy API key (section 2.3), and you land on the Dashboard. From there use the sidebar to move around.

How do I get an API key?

API keys come from your Mintzy account at mintzy.in. The app's sign-in screen links to it. The key also determines which broker your sessions use.

How do I create a saved strategy?

Go to **Launch Terminal** → **Saved strategies** → **New strategy**, fill in the setup, and click **Save strategy**. See section 6.3.

Where can I find my trading sessions?

Two places: the **Sessions** tab on the Dashboard (all sessions, paginated), and the **sessions panel** inside Launch Terminal (Live and History).

How do I open an old session?

Click its row in the Dashboard's Sessions tab, or click it in the Launch Terminal sessions panel. It opens read-only with its trade log and P&L.

How do I download my session data?

In the Sessions tab, click the download icon in a row (or *Download latest* at the top). You get a CSV of the tradebook or logs.

How do I edit a saved strategy?

On the Saved Strategies page, click **View / Edit** on the strategy's card, change the fields, then click **Update strategy**.

How do I delete a saved strategy or a session?

Strategy: click **Delete** on its card and confirm. Session: in Launch Terminal, hover the session in History and click the trash icon, then confirm. See sections 6.4 and 6.6.

How do I change my settings?

Click **Settings** in the sidebar. Toggle auto-launch, minimize-to-tray, and notifications, and check for app updates. See section 5.9.

How do I log out?

Click the log out icon at the bottom of the sidebar (section 6.7).

Why do I see a green "Live" mark on Launch Terminal?

It means a session is trading right now. Open Launch Terminal to see it.

Why is my performance shown as dashes?

Performance is computed from your live session trades and settles once a day at 4:30 pm IST. If you have no qualifying trades yet, or the calculation hasn't finished, dashes are shown.

9. Glossary

Term	Meaning
API key	The secret key from your Mintzy account that signs you in to the app. It also decides which broker the app trades through.
Broker	The company that holds your trading account (for example Angel One, TradeX, or Bear Street). The app trades through your broker.
Session	One run of the trading bot. A session connects to your broker, runs a strategy, and records its trades and P&L.
Live session	A session that is trading right now.
Simulation	Practice trading with no real money, used before going live (Angel One and Bear Street). Sim rows are tagged "Sim" in the logs.
TOTP	A 6-digit time-based code from an authenticator app, used as the second step of broker login.
P&L	Profit and loss — the money made or lost.
Equity	The total value of your account including open positions.
Free cash / Cash in broker	The cash available in your broker account for trading.
Saved strategy	A saved trading setup (symbols, capital, stop-loss, candle, strategy) you can reuse.
Leverage	A 1x–5x multiplier that scales the position size of a saved strategy.
Candle interval	The timeframe of the price candles the strategy trades on (1m, 5m, 15m, 75m).
Stop loss	The percentage price drop that closes a trade to limit a loss.
Tradebook	The record of all trades placed in a session.
CSV	A spreadsheet-style file you can open in Excel; used to download session logs and tradebooks.
Drawdown	The largest drop from a peak in your performance — a measure of risk.
Win rate	The share of trading days that ended with a profit.

10. Quick Start Guide

The fastest path to using the app's main purpose — automated trading — in seven steps.

- 0 **Sign in.** Open the app, paste your Mintzy API key, click **Continue**.
- 0 **Check the Dashboard.** Look at your cash, equity, and this month's P&L.
- 0 **Open Launch Terminal** from the sidebar.
- 0 **Save a strategy** (optional): Saved strategies → New strategy → Save strategy. Or use a strategy you already saved.
- 0 **Start a session:** click **New session**, enter your broker credentials, and continue (enter the 6-digit code if asked).
- 0 **Configure and start:** choose your strategy and allocation, then click **Start Trading**.
- 0 **Watch:** the live dashboard shows the P&L chart and trade log. Find it again any time from the sessions panel.

Figure 23 — Launch Terminal, where sessions are started and watched

TIP

Still unsure? The built-in **Documentation** page (sidebar → Documentation) summarises everything, and sections 5–6 of this guide cover each feature and workflow in detail.

End of guide — Mintzy Plugin v1.1.9. Screenshots captured from the live application on a test account. Verify against your own screen; broker names and error wording may vary by account.
